

Overall, First Semester Schedule:

We will have ten weeks to finish the project. On week 7 we won't have a class, so we will take that chance to work more on our presentation and do some research. Week 8 we will keep on practicing for the presentation. Week 9 we will work on the design phases such as the initial prototype, lab test, and pre-production. Week 10 we will build and construct the project. Then we will do the implementation and there will be the final testing.

Since we are 5 people, we will split the tasks between us. We will have the designer, researcher, and buyer. Then each person will get his task based on his major. We will have 3 EE students and 2 CS students and that will help us to improve the project.
